

8. PROJECT DEMONSTRATION PHASE

Project Title: Script-Controlled ACL – Restrict Record Access Based on Field Value

1. Objective

To implement a Script-Controlled Access Control List (ACL) in ServiceNow to restrict record access based on field values and ensure that only authorized users can view records.

2. Activities Performed

Opened the ServiceNow application.

Navigated to System Security → Access Control (ACL).

Created a new Access Control List.

Selected the required table and Read operation.

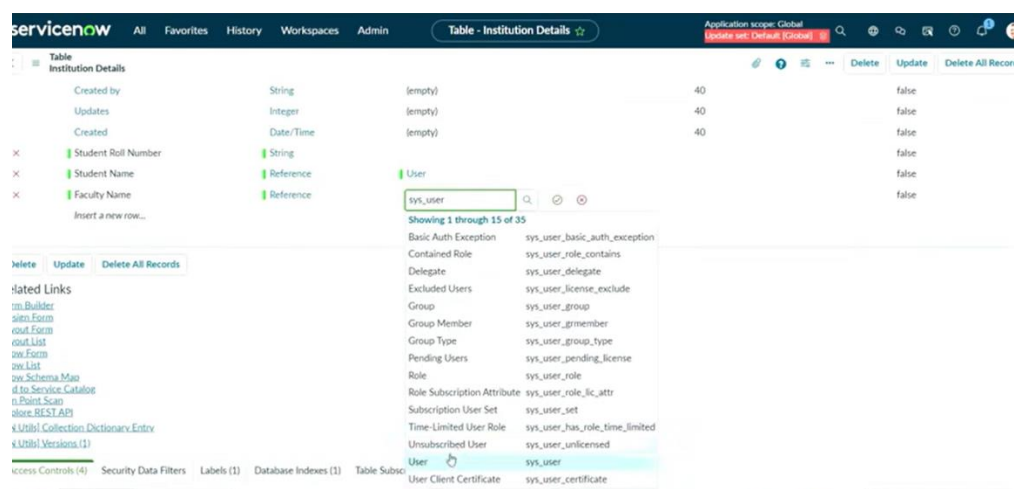

Added a script to validate the access level field.

Saved and tested the ACL with different field values.

Verified access granted for public records and denied for restricted records.

3. Expected Output

Users can view records when the access level is set to public.
