

4. Project Planning Phase

Objective

To organize the implementation into manageable activities and define the sequence of work for configuring a script-controlled ACL.

Activities Performed

- Review the project objective and finalize the access control requirements.
- Prepare the required ServiceNow table, records, users, roles, and test data.
- Identify the field value that will be used for restricting record access.
- Create the ACL and configure the required table, operation, and conditions.
- Develop the script to check the specified field value and control access.
- Prepare positive and negative test scenarios for access validation.
- Capture screenshots and prepare the final project documentation.

Expected / Produced Output

The planned implementation follows a structured sequence from environment preparation to ACL configuration, script development, testing, documentation, and demonstration.
