

6.PROJECT TESTINGPHASE

OBJECT

- To test the Script-Controlled ACL configured to restrict record access based on a field value such as Department.
- To verify that authorized users can access the records.
- To verify that unauthorized users are denied access.
- To confirm that the ACL works correctly for different test scenarios.

ACTIVITTIES PERFORMED

1. Logged in using different authorized and unauthorized users.
2. Opened the required table and attempted to access records.
3. Checked the ACL script and field-value comparison.
4. Tested records with matching and non-matching field values.
5. Verified the access result — Allow / Deny.
6. Captured screenshots of the testing process and results.

EXCEPTED /PRODUCED OUTPUT

- Script-Controlled ACL is successfully tested.
- Authorized users can access records when the field value matches.
- Unauthorized users are denied access when the field value does not match.
- Record access restriction works as expected.
- Test results are verified and documented.
- Screenshots of the ACL configuration and access results are produced.

Description

Tables

Conditions

Access Control Rules have two decision types, and these types will behave differently depending on conditions.

1. Allow Access: Allows access to a resource if all conditions are met. Additional ACLs may grant access to records where this ACL has not granted access.

2. Deny Access: Denies access to a resource unless all conditions are met. Additional ACLs may not grant access to records where this ACL has denied access.
